

# Chapter: Creating Consistent Looking Websites

## 1. What is a Master Page?

It's a layout template used to standardize the design of ASP.NET pages.

## 2. What does a Master Page provide?

It provides a shared layout and placeholders for content pages.

## 3. What are Content Pages?

Pages that hold specific content and merge with the master layout.

## 4. How is output produced?

ASP.NET combines master and content pages into one web page.

## 5. Main benefit of a Master Page?

Central control over layout; changes apply to all linked pages.

## 6. Is a Master Page directly viewable?

No, it's a template and can't be requested by browser.

## 7. Design-time support in VS?

Visual Studio allows preview and editing of layout during development.
