ASP.NET Server Controls - Short Q&A

1. What is the role of HTTP?

It allows communication between web browsers and servers.

2. What is an ASP.NET page?

A Web Form (.aspx) that needs a server to process and display.

3. What is Application Mapping?

It maps file extensions like .aspx to the app that handles them.

4. What are ASP.NET Server Controls?

Controls like Button, Label, GridView used in Web Forms.

5. What is Postback?

Sending form data back to the server.

6. What is AutoPostBack?

A property that triggers postback on control change.

7. What is IsPostBack?

Property to check if page was reloaded via postback.

8. POST vs GET methods?

POST sends data securely in body, GET appends to URL.
